SYSTEM AND METHOD FOR AUTOMATIC GENERATION OF PRESENTATIONS BASED ON AGENDA

Abstract

5

In enterprises, presentations are designed and made to visiting clients on a routine basis and it is expected that such presentations are required to be effective as much of business depends on right kind of information in right depth and volume made to right audience. The typically followed manual process depends on the capabilities of a person to create

10   "right" presentation targeted for the right audience. It is required to obtain as much information as possible from such persons and use it to generate presentations as much automatically as possible. The automatic generation of presentation is based on (a) agenda; (b) audience profile; (c) analogical examples; and (d) templates. The system generates draft version of presentations and lets users to interactively tune the draft

15   presentations to generate final version of the presentations. The analogical examples are identified manually and are made part of the system while the templates are automatically generated based on "best" presentations that are provided as input to the system.
